

Aerial Work Platform

Aerial Work Platforms - There are numerous attachments intended for lift trucks which can be used to help expand the functionality of your lift truck and allow you to lift objects, handle materials with greater ease or to complete clean-up tasks.

Several attachments were specially meant for the forks themselves. For example, blade extensions could be utilized if you need more fork length, which increases lifting capacity. Fork extensions come in lengths varying from 48-120 inches. Triangular or rounded attachments are one more type utilized if transferring rolled material so as to make certain it does not roll off of the typical flat blades.

Examples of lifting accessories comprise pivoting and telescoping crane or boom accessories. They can come in a number of various kinds and are most often meant for moving lumber, poles, metal bars and other sort of bulky objects. Other attachments like for instance different kinds of hook plates and hooks are accessible to carry objects utilizing a sling or chain. Magnetic lifters and slab lifters are other objects that could be utilized along with hook attachments. Slab lifters are specialized accessories that are meant for lifting different materials which are delivered in a slab or sheet format. Rug rams or carpet poles are other lifting tools which connect to your forklift so as to make transferring rolls of carpet a lot easier. The accessory hooks onto the forklift's blades and has a pole that goes through the center of the carpet roll.

There are several various kinds of forklift accessories which could be designed for facility maintenance like for example snow forks. These blades connect to front end loaders and could transport materials like for example dirt, soil and snow. Other common cleanup accessories comprise standard sweepers and magnetic sweepers. Standard sweepers includes a broom that the lift truck forks connect onto for sweeping large spaces like for example parking lots or warehouse and factory floors. The magnetic sweeper is similar except that it has a magnetic plate instead of bristles. The magnetic sweeper is utilized in places where there is lots of metal debris like on shop floors for example. Sweepers have widths up to sixty inches and this surface area makes clean up easy and fast.

Material spreaders are other accessories used on forklifts. These spreaders are handy for a variety of applications like spreading fertilizers, insecticides, seeds, ice melt, rock salt and pellets.

Work platforms are another optional lifting accessory which many companies use on a daily basis. The platforms range in size from 36" x 36" to up to 60" x 60". There are a few units existing that are capable of folding up and storing into a smaller space. Work platforms are designed to raise employees up to an overhead location using the forklift. Larger platform models have added space for employees to be able to bring tools and other necessary things meant for the job. Usually work platforms are made of steel or ploy material.
